

[14/10/2015]

Meeting Minutes

Attending

Mateusz Maly, Jan Gucwa, Filip Borowiak, Karol Baran, Dawid Janelli

Announcements

Second meeting to discuss the research and technology that will be used.

First draft of the project scope was shared with the team.

Project Plan shared with the team and each phase discussed.

Discussion

Discussed the research that each member has conducted and the technology that we want to use in the project.

Outcomes

Few possible APIs were found, Dawid has found Rome2Rio, which we are planning to use for the collection of prices for each journey. Karol and Filip have researched the best language to implement the website. We have decided to use PHP as we all have some experience from previous years. Jan and I have been researching how to implement the server and the App. We have found a number of possible APIs that we can possibly use such as Google or TFL APIs. We have also found some back up ones in case something goes wrong with the original ones. We decided to implement the server in Java as learning a new language would be too time consuming.

Tasks

Mateusz - Finish the project scope and implement the database

Jan - start implementing the server

Karol - Design the Test Plan

Filip - Design the Quality Assurance Document

Dawid – Draft documents template
